

1)

PROJECT NAME: Monkey Jump!

What is it?

2D Platformer where you go from bottom to top by jumping on platforms. Think Doodle Jump like platforms jump king style where falling can bring you back to bottom. It also had a story which was: You are a monkey, some aliens steal your banana, your goal is to go to very top and reach the end goal which was touching the alien spaceship sprite.

Engine:

Unity

Language:

C#

Platform:

Mobile

Current status:

Completed & Published

When did I make it?

June 2025

What did I personally do?

Monkey Falling Animation, Platform placement and level design, story, cinemachine cinematic. UI design controls and menus, implemented 2 levels where asteroids go left to right and then come back to left and 2nd one where player slows down when on snow platform.

Interesting systems:

Hold to Jump higher (implemented by Gaurav), Different levels have different mechanics/features (like snow makes you slow, some have sloped platform, asteroids level, etc), all level were stacked on top of one another in 1 scene so falling would cause you to go down like getting over it.

Interesting technical problems:

None that I remember. Mainly unity exports because we were new.

What was difficult?

Getting downloads

What did I learn?

All Levels Designing, how to publish on playstore, programming the mechanics for the 2 specific levels.

Link:

https://play.google.com/store/apps/details?id=com.SevenForgeStudios.MonkeyJump&hl=en_IN

Screenshots available? On Playstore

2)

PROJECT NAME: Full Throttle

What is it?

An infinite runner where you are a biker in first person pov and you are on a highway, where you dodge oncoming traffic. It was not lane based. You could be anywhere on the road unlike subway surfer where it is only 3 lanes.

Engine:

Unity

Language:

C#

Platform:

Mobile

Current status:

Completed & Published

When did I make it?

July-August 2025

What did I personally do?

Designed the levels, the levels had building and props on side. We had cars which were part of the level not created. The whole level prefab came towards the player. So it felt like you are moving forward. Also programmed level spawner and deleter. UI coding and design.

Interesting systems:

Tilt to move (implemented by Gaurav), Tap left or right side to move (imp by Gaurav), You could be anywhere on road.

Interesting technical problems:

Levels not spawning properly, fixed by changing position of spawning till it was good.

What was difficult?

Getting Downloads

What did I learn?

Level Design, How to spawn levels and destroy them, UI coding.

Link: Playstore removed it as it was built on a unity android sdk with a vulnerability. I will need to reupload on a new build

Screenshots available?: On playstore.

3)

PROJECT NAME: Brick Breaker (College Course Work)

What is it?

Arkanoid Copy. Basically Brick Breaker. It was college work. Only built 1 level, nothing else, just 1. End on destroying all the bricks.

Engine:

Unity

Language:

C#

Platform:

PC

Current status:

Completed but not published

When did I make it?

August - September 2025

What did I personally do?

Player movement and bounds, ball's physics material, level design (placed bricks in a rectangle formation), win/end screen, brick destroying feature, ball destroying out of bounds feature.

Interesting systems:

None, just plain old Arkanoid.

Interesting technical problems:

Ball not destroying when falling down, fixed later idk how.

What was difficult?

Glitches and Bugs

What did I learn?

Basic Programming and Unity Fundamentals

Link: Not Released

Screenshots available?: No. But imagine simple bare bones arkanoid

4)

PROJECT NAME: Flappy Bird (College Course Work)

What is it?

A complete flappy bird clone. But a butterfly instead of bird and Carnivorous plants from top and Bottom instead of pipes. Pipes which were a prefab, spawning ahead.

Engine:

Unity

Language:

C#

Platform:

PC

Current status:

Completed but not Published

When did I make it?

September – October 2025

What did I personally do?

Pipe/Plant Generation, butterfly animation setup (using the sprites to make a unity animation), butterfly jump and die mechanic, pipe coming towards player mechanic and destroying offscreen mechanic.

Interesting systems:

None, just normal flappy bird mechanics.

Interesting technical problems:

None.

What was difficult?

Nothing in particular.

What did I learn?

Jump Mechanics using `rb.addForce`, Collision Detection and basic unity functions and fundamentals.

Link:

Not Published on PlayStore

Screenshots available?:

No

5)

PROJECT NAME: Terrain Creation & Character Controller (College Course Work)

What is it?

Designed and made a 3D Terrain using Unity Terrain Tool and Component, Placed House and Building Assets to design a town in the Terrain, made a pond and used various Terrain Tools like Path, Foliage/Grass, Raise Terrain and Depth Tool. Imported Character and Animation from Mixamo and created many States like Running, Idle, Jump. Added a Car Asset and Ability to Get in Car and drive it while hiding the player character. (Coded with AI).

Engine:

Unity

Language:

C#

Platform:

PC

Current status:

Completed but not Published

When did I make it?

October 2025

What did I personally do?

Design the Terrain and Town, Imported the FBX character model along with its animations, Setup States and Coded Animation Trigger for various States like Idle, Running, Jumping, etc. Coded Car Mechanics with AI

Interesting systems:

Car Mechanics like GTA but without Animations of Getting in and out of car.

Interesting technical problems:

Issues with Importing Assets, Bugs and Glitches like falling through Terrain, etc. Issues and Bugs while making the Car Mechanics using AI

What did I learn?

Terrain Making, Town Making, Importing Assets, States, Trigger

Link:

Not Published on Play Store

Screenshots available?:

No

6)

PROJECT NAME: Infinite Runner 2 (College Course Work)

What is it?

Actual Subway Surfer Clone, With 3 Lanes, Running and Dying Animation, with Level on sides of lane designed with Unity Terrain Tool, Randomly Spawning Obstacles (Hyenas) in front in one of lanes.

Engine:

Unity

Language:

C#

Platform:

PC

Current status:

Completed but not Published

When did I make it?

November 2025

What did I personally do?

Platform Spawning, Enemy Spawning, Lane Changing, Level End Condition, Score system, animation controlling, basics, etc. Designed the Side Areas of the Platform Level using Terrain Tools

Interesting systems:

None. Basic Subway Surfer bare bones, no coins or any special features.

What was difficult?

Nothing Major just bugs and glitches

What did I learn?

Fundamentals, Basic Mechanics, etc

Link:

Not Published on Play Store

Screenshots available?:

No

7)

PROJECT NAME: Project Mauve (In Progress)

What is it?

It was supposed to be a game made for my gf for anniversary. But never completed. It was going to be a 2D Top-Down view RPG Casual Puzzle Game. But I only designed the levels using Sprites. And didn't do any coding or any Mechanics yet. Premise was that She would go from door to door, room to room each room had a puzzle with answer being something from relationship. Each Asset Prop placed would be interactable and have a message like: When clicking a bookshelf, it would have a fun gag about a book on her habits, etc.

Engine:

Unity

Language:

C#

Platform:

PC/Mobile (Didn't decide)

Current status:

Incomplete (just Structed & Planned)

When did I make it?

December 2025

What did I personally build?

Character Sprite and Animation using a pixel art template. Designed Levels using 2D sprites.

Interesting systems:

Object Interactivity (Planned), Unique Puzzles (Planned)

Interesting technical problems:

Not technical but I just never completed it.

What was difficult?

Getting to actually make it after demotivation

What did I learn?

Aseprite, Level Design

Link:

Never Completed so not published

Screenshots available?: No

8)

Game Ideas that are just Ideas: Skans Fortuna, Careful Courier

NOTE:

Although games have no Screenshots, I can get new ones of them if we were to add them to site by either remaking them or opening old Unity Version Control Builds.
